

Speech Title: Enabling Smart Environments through Internet of Things

Abstract: This keynote addresses a hot topic focusing on enabling Smart Environments through Internet of Things, considering their major issues and research perspectives. It starts with the introduction to Internet of Things and their typical application scenarios and their main verticals. Several projects are presented to illustrate different solutions based on an IoT approach. IoT Opportunities to “change the World” are discussed. The communication ends with new trends and challenges on Internet of Things, suggesting further research topics.
